PROFESSIONAL SUMMARY

Senior ServiceNow Consultant with 4+ years of enterprise-scale delivery experience, specialising in full-platform engineering - from greenfield scoped application architecture and custom JavaScript/Glide scripting to OpenAI-integrated catalog intelligence and advanced Flow Designer automation. Development is the primary discipline; production administration and release governance are maintained as a secondary responsibility, ensuring every feature shipped is owned through to live operation. Holds four ServiceNow certifications (CSA, CAD, CIS-ITSM, CIS-DF/CMDB) and brings the rare combination of a developer's technical depth with a consultant's delivery mindset - built for client-facing ServiceNow practice.

TECHNICAL SKILLS

Development	Service Catalog, Record Producers, Business Rules, Client Scripts, Script Includes, UI Policies & Actions, Flow Designer, Workflows
Scripting	JavaScript (ES6+), Glide APIs, GlideAjax, Scripted REST API, OpenAI API Integration
Platform	ITSM (Incident, Problem, Change), CMDB, CSDM, Scoped Apps, Scheduled Jobs, Data Imports, Update Sets
Operations	Instance Administration, Cloning & Post-Clone Validation, Release Management, RBAC, User/Group/Role Management
Tooling	GitLab (CI/CD), Postman, SnowMirror, Oracle SQL Developer, SOAP UI
Methodology	Agile, ITIL, DevOps, Sprint Release Management

PROFESSIONAL EXPERIENCE

ServiceNow Senior Consultant – Platform Engineer · **Tata Consultancy Services (TCS)** July 2022 – February 2026 · Chennai

Dual-track role: primary focus on end-to-end platform development and feature engineering; secondary responsibility for production administration, weekly release cycles, and SLA governance.

Platform Development [Primary]

- **Greenfield App Architecture** Designed and delivered a custom ServiceNow scoped application from scratch — modelling an AI device manufacturing company — with full workflow architecture, Glide scripting, and a GitLab CI/CD pipeline; demonstrates ability to own a platform build end-to-end.
- **AI / OpenAI Integration** Integrated ServiceNow with the OpenAI API to build an intent-recognition engine embedded in the Service Catalog - a first-of-its-kind implementation in the account, that intelligently routes users to the correct catalog item at submission, measurably reducing misrouted tickets.
- **Script Include Library** Engineered a reusable Script Include library modularising shared business logic across 10+ catalog workflows, reducing code duplication by ~40% and cutting future development cycle time.
- **Client-Side Engineering** Built GlideAjax-driven Client Scripts enabling real-time server-validated dynamic form behaviour on high-traffic catalog items, eliminating page reloads and improving request accuracy at scale.
- **Business Rules & Automation** Implemented Business Rules for SLA-based trigger automation, data validation, and approval escalation across 5+ ITSM workflows, replacing fragile manual processes.
- **Flow Designer** Architected multi-stage Flow Designer flows covering approvals, task generation, and notification chains across complex ITSM scenarios, removing email-based coordination touchpoints.
- **Service Catalog Engineering** Designed and built 10+ multi-level Service Catalog items with branching approval logic, dynamic variable sets, and conditional UI policies - from requirements through to production deployment.

Process Automation & Innovation

- **Automated Status Dashboard** Replaced daily manual PowerPoint status reporting with an interactive real-time dashboard, saving approximately 45 minutes per team member per day and delivering live visibility to senior stakeholders.
- **CMDB Data Quality** Migrated web service account inventory from Excel into a structured cmdb_subscriber table, enabling real-time CMDB accuracy, eliminating a manual audit step, and improving audit-readiness.
- **Change Governance** Enforced Change Management data quality via a server-side validation Business Rule blocking premature scheduling without required comments, directly reducing CAB rejection rates.
- **Access Security** Automated delegate end-date assignment for inactive users via Business Rule, closing a privilege-accumulation risk with zero manual HR intervention required.
- **Data Import Automation** Created reusable data source configurations enabling non-developer teams to run structured bulk data imports independently, reducing ad-hoc developer dependency.

Production Operations [Secondary]

Owned platform stability alongside development work — ensuring every feature built was safely shipped, monitored, and supported in live enterprise environments.

- Executed all weekly production deployments and update set migrations within defined change windows — zero rollbacks across 3.5 years of release ownership.
- Administered multiple ServiceNow instances including Production: user, group, role, and access control management for a large enterprise user base.
- Performed full instance cloning cycles and post-clone validations, maintaining DEV/TEST environment parity across sprint cycles.
- Maintained 100% SLA compliance across 1,000+ incidents and oversight of 5,000+ catalog tasks throughout tenure — delivered as an operational responsibility alongside active development sprints.
